

Papisil

(iodo-salicylic acid)

- Acne Remedy
- Tattoo Remover
- Scar & Blemish Remover
- Bumps, Moles and Calluses
- Warts, and Dark Patches

Use Papisil for better looking and healthy skin!

Papisil nourishes the skin with anti-microbial properties that promote the growth of new healthy skin cells. Because of the new skin being formed, the dead skin must exfoliate thus leaving beautiful young healthy looking skin. Papisil combines the power of salicylic acid which is a known acne treatment and exfoliant along with iodine a long time well known antimicrobial properties and anti-inflammatory.

- Papisil can be used on pimples cause by acne. Generally pimples go away 50% sooner and prevent new pimples from forming.
- As a tattoo remover, Papisil exfoliates the skin over the tattoo inked area. Generally tattoos are visibly lighter in the first 2 weeks of use and are lightly noticeable in six months.
- Areas of hyper-pigmentation and black patches from old pimples, and razor bumps are greatly lightened in 2 weeks of use.
- Papisil greatly reduces the size of most facial moles and warts.
- Thick calluses as on the hands and pads of the feet can be made soft again
- Corn calluses on the toes

Subject: 16y/o female with papule lesion under left eye. The lesion was present for 2 weeks. Papisil applied 3 times in 3 days, the after photo was taken 1 week after the first application.
